Your non-ferrous metals and residues in safe hands

Non-ferrous metals as aluminium, lead and zinc can be re-melted and recycled indefinitely. The collection and processing of these metals are therefore very much worthwhile. Not only for the environment but also for your finances. After all, most materials are valuable. Van Peperzeel gladly offers you to estimate the value of your waste material.

From copper pipes to water meters, from plate scraps to zinc gutters. We offer you an excellent price in conformity with market prices. A variety of wrappings are available for packaging. Non-ferrous metals fall under the green list procedure of the EU regulation 1013/2006 which states a clear passage to other EU countries to which conditions are dictated to the corresponding documentation. (appendix VII)

Residues

Every company produces its own materials. Skimmings, turnings, polishing materials, filter cakes. Especially lead-, aluminium-, copper- and zinc residues have been trade on the international market for years. For thirty years, Van Peperzeel has experience with estimating, processing and trading of residues. Naturally, we have the required permits for safe transport, storage and process. We work together with acknowledged processors throughout Europe.

Amber list

Nowadays, most residues fall under the amber list procedure of the EU regulation 1013/2006. This procedure has been revised at Brussels. The revision included the sharpening of the procedure so that no open passage of these types of residues is allowed. Only with the permission of all involving transport countries, transportation is allowed. For many years Van Peperzeel has the required permits to safely and legally transport residues (which also applies to the new situation) throughout Europe.

Van Peperzeel provides a reliable, flexible and safe collection of your waste products. Also your company can benefit from this. We gladly take all (environmental) care out of your hands.
